

A(n) Action Day has been declared for Baton Rouge Area, LA, on Monday, Jun 13 and Tuesday, Jun 14

Today and Tomorrow's Forecast

Monday, Jun 13:	117	Unhealthy for Sensitive	Particle Pollution (2.5
	AQI	Groups	microns)
	36 AQI	Good	Ozone
Tuesday, Jun 14:	110	Unhealthy for Sensitive	Particle Pollution (2.5
	AQI	Groups	microns)
	36 AQI	Good	Ozone

Monday and Tuesday, southwesterly winds will continue to transport Saharan dust across Louisiana. In addition, a ridge of high pressure aloft will limit atmospheric mixing each day. These conditions will result in Unhealthy for Sensitive Groups AQI levels due to particles statewide on both days. Wednesday, winds are expected to become more south-southeasterly, pushing the highest concentrations of dust west of Louisiana. However, lingering dust moving in from the northern Gulf will keep AQI levels high-Moderate across the Bayou State.

The Air Quality Index indicates that particles will be at the orange level, which is Unhealthy for Sensitive Groups. Sensitive groups, such as people with lung disease (including asthma), heart disease, children and older adults, and people who are active outdoors should limit prolonged exertion.

More information about current air quality is available online at the DEQ website www.deq.louisiana.gov.
